199t-230t	June	403t-430t	December

Table of Contents

CORROSION, Volume 19, 1963

January

Physical and Chemical Study of an Organic Inhibitor for Hydrogen Sulfide Attack by O. L. Riggs, Jr. and F. J. Radd 1t

Effect of Inhibitors on Protective Properties of Iron Sulfide Scale, by W. B. Hughes and V. L. Stromberg 9t

Joint Action of Hydrogen Sulfide and Organic Compounds on Corrosion and Embrittlement of Iron in Sulfuric Acid, by Z. A. Iofa and G. N. Tomashova 12t

Corrosion Rates of Ferrous Alloys (Fe-Cr and Fe-Cr-Si) Measured by Polarization Technique, by W. J. Schwerdtfeger 17t

Bibliography on Corrosion Inhibitors for High Purity Water. A Report of NACE Technical Unit Committee T-3F on Corrosion by High Purity and Related Waters in Nuclear Power and Steam Generating Plants 26t

February

Anodic Passivation of Steel in 100 Percent Sulfuric Acid, by A. O. Fisher and J. F. Brady. 37t

Stress-Corrosion Cracking Investigation of Two Low Alloy, High-Strength Steels, by Robert A. Davis 45t

Analytical Techniques in Corrosion Product Identification, by Dale A. Vaughan 55t

Coatings Formed on Steel by Cathodic Protection and Their Evaluation by Polarization Measurements, by W. J. Schwerdtfeger and Raul J. Manuele 59t

Electrochemical Methods for Determining Passivation Properties of Paint Pigments, by I. L. Rozenfeld, F. I. Rubinshtein, S. V. Yakubavich and A. G. Kusskaya 69t

March

Evaluation of Corrosion-Resistant Steels Using Potentiostatic Polarization Curves, by Milan Prazak 75t

Velocity Studies: Diffusion-Controlled Corrosion Reactions, by George S. Gardner 81t

Improved Laboratory Technique for Investigating Corrosion by Recirculating Cooling Water, by A. Orman Fisher 91t

Dislocation Substructure vs Transgranular Stress Corrosion Susceptibilty of Single Phase Alloys, by P. R. Swann 102t
Discussion 427t

Chemical Analysis of Stainless Steel Corrosion Products. A Report of NACE Technical Unit Committee T-3B on Corrosion Products ... 113t

April

Anodic Polarization Characteristics of Gold and Silver in Chloride and Sulfide Media, by F. P. A. Robinson and F. A. Frost 115t
Discussion 428t

Observations on the Dissolution Behavior of Iron Whiskers, by C. C. Seastrom, F. H. Beck and M. G. Fontana 120t

Influence of Oxygen on High Temperature Aqueous Corrosion of Iron, by W. E. Ruther and R. K. Hart 127t

Kinetics and Mechanism of Columbium Alloy Corrosion in Superheated Steam, by D. L. Douglass 134t
Discussion 230t

Polarization Studies of Aluminum Alloys in Water at 200 C and 300 C, by J. H. Greenblatt and A. F. McMillan 146t

May

Effect of CO_2 on the Strength and Ductility of Type 304 Stainless Steel at Elevated Temperatures, by W. R. Martin and H. E. McCoy 157t

pH Microelectrodes for Use Near Corroding Surfaces, by S. Mori, R. E. Loess and J. E. Draley 165t
Discussion 428t

May—Continued

Effect of Solution Heat Treatment on Corrosion Kinetics of Zirconium in 20 Percent Hydrochloric Acid at High Temperature and Pressure, by William E. Kuhn 169t

Effects of Hydrogen Halides on Anodic Polarization of Stainless Steel, by Olen L. Riggs, Jr. 180t

Corrosion and Age Hardening Studies of Some Cast Stainless Alloys Containing Ferrite, by J. W. Flowers, F. H. Beck and M. G. Fontana 186t
Discussion 429t

June

Corrosion Engineering and Corrosion Science, by M. G. Fontana 199t

Corrosion Resistance in Sea Water of Medium Strength Aluminum Bronzes, by B. Upton 204t
Discussion 429t

Corrosion Resistance of Molybdenum Modified Cr-Ni-Mn Austenitic Stainless Steels, by F. B. Nair and M. Semchysen 210t

Effect of Platinum, Copper and Iron Ions on Corrosion and Passivity of Titanium in 15 Percent Hydrochloric Acid, by N. D. Tomashov and R. M. Al'Tovskii 217t

Linear Polarization Measurements in the Study of Corrosion Inhibition, by R. A. Legault and M. S. Walker 222t

Discussions

Influence of Arsenic on Pickling of and Hydrogen Absorption by Mild Steel in Sulfuric Acid Solutions: J. C. Hudson 227t

Study of Organic Inhibitors for Hydrochloric Acid Attack on Iron: James R. Dafler, Page 227t; Reply by Olin L. Riggs, Jr. 228t

Corrosion of Carbon Steels and Other Steels in Simulated Boiling-Water-Reactor Environment: Phase II: J. E. Draley, Page 228t; George Panter, Page 229t; Joseph E. Le Surf, Page 229t; James K. Rice, Page 229t; C. Richard Berger, Page 230t; Replies by Authors 228t-230t

Study of Stainless Steel Stress-Corrosion by Potential Measurements: B. F. Brown and M. H. Peterson, Page 230t; Reply by Bengt Andersson 230t

July

Effect of Metal Composition and Structure on Corrosion and Oxidation, by Herbert H. Uhlig 231t

Anodic Passivation of Steel in 100 Percent Sulfuric Acid, by James F. Brady 238t

Electrochemical Behavior of Aluminum Alloys Susceptible to Intergranular Corrosion. I. Effect of Cooling Rate on Structure and Electrochemical Behavior in 2024 Aluminum Alloy, by Sara J. Ketcham and F. H. Haynie 242t

Effect of Applied Stress and Cold Work on Stress Corrosion Cracking of Austenitic Stainless Steel by Boiling 42 Percent Magnesium Chloride, by H. P. Hawkes, F. H. Beck and M. G. Fontana 247t

Zirconium Alloy Corrision in High-Temperature Halide Solutions, by W. E. Berry, E. L. White and F. W. Fink 253t

August

Pitting Corrosion of Metals, by Ja. M. Kolotyrkin 261t

An Eddy Current Gauge for Measuring Aluminum Corrosion, by S. Mori, R. E. Loess and J. E. Draley 269t

Relationship of Heat Treatment and Microstructure to Corrosion Resistance in Wrought Ni-Cr-Mo Alloys, by Michael A. Streicher 272t

Hydrogen Uptake of Zirconium Alloys During Water and Steam Corrosion, by H. H. Klepfer 285t

Corrosion of Platinum, Gold, Silver and Refractories in Molten Carbonates, by G. J. Janz, A. Conte and E. Neuenschwander 292t

September

Initial Corrosion of Aluminum Alloys in High Temperature Water, by J. H. Greenblatt 295t

Anodic Protection of Carbon Steel in Sulfuric Acid, by W. P. Banks and J. D. Sudbury 300t

Corrosion Tests at Elevated Temperatures and Pressures, by C. R. Bishop 308t

Relationship Between Hydrogen Pickup and Susceptible Paths in Stress Corrosion Cracking of Type 304 Stainless Steel, by D. A. Vaughan, D. I. Phalen, C. L. Peterson and W. K. Boyd 315t

Some Effects of Alkalis on Corrosion of Mild Steel in Steam Generating Systems, by M. C. Bloom, M. Krulfeld and W. A. Fraser 327t

October

Stress-Corrosion Cracking, by T. P. Hoar 331t

Long Term Air Corrosion of Several Nickel-Based Alloys, by G. W. Titus and J. S. Brunhouse 339t

Stress Corrosion Cracking of Type 347 Stainless Steel and Other Alloys in High Temperature Water, by P. D. Neumann and J. C. Griess 345t

Corrosion of Iron in an H_2S-CO_2-H_2O System: Corrosion Film Properties of Pure Iron, by J. B. Sardisco, W. B. Wright and E. C. Greco 354t

Chemical Thermodynamics of High Temperature Reactions in Metal Dusting Corrosion, by P. A. Lefrancois and W. B. Hoyt 360t

November

Implications of the Stress Aging Yield Phenomenon with Regard to Stress Corrosion Cracking, by P. R. Swann and H. W. Pickering 369t

Electron Metallography of Chemical Attack upon Some Alloys Susceptible to Stress Corrosion Cracking, by H. W. Pickering and P. R. Swann 373t

Statistical Distribution of Stress Corrosion Endurance, by F. F. Booth, G. E. Tucker and H. P. Godard 390t

High Temperature Mercaptan Corrosion of Steels, by A. S. Couper 396t

December

Electrochemical Behavior of Aluminum Alloys Susceptible to Intergranular Corrosion. II. Electrode Kinetics of Oxide-Covered Aluminum, by F. H. Haynie and S. J. Ketcham 403t

Corrosion Resistance of Type 329 Stainless Steel in Nitric Acid Containing Chloride Ion, by Irvine I. Tingley 408t

Effect of Oxidation Rate on Hydriding of Zirconium Alloys in Gas Mixtures Containing Hydrogen, by D. W. Shannon 414t

Anodic Polarization Curves of the Platinum Electrode in Neutral and Alkaline Potassium Chloride Solutions, by B. M. Blavatnik and G. A. Tsiganov 421t

Fundamental Considerations of Stress Corrosion, by M. C. Huffstutler 423t

Discussions

Dislocation Substructure vs Transgranular Stress Corrosion Susceptibility of Single Phase Alloys: T. P. Hoar, J. C. Scully, D. L. Douglass, Page 427t. T. B. Cotton, Page 428t. Replies by P. R. Swann 427t-428t

Anodic Polarization Characteristics of Gold and Silver in Chloride and Suliate Media: J. C. Scully, Page 428t; Reply by F. A. Frost 428t

pH Microelectrodes for Use Near Corroding Surfaces: L. P. Sudrabin, H. F. Haase, W. E. Berry, Page 428t; Replies by S. Mori 428t

Corrosion and Age Hardening Studies of Some Cast Stainless Alloys Contining Ferrite: D. L. Hawke, D. W. McDowell, G. Sorell, Page 429t; Replies by J. W. Flowers 429t

Corrosion Resistance in Sea Water of Medium Strength Aluminum Bronzes: R. E. Maersch, Page 429t; G. Ladd, F. W. Fink, Page 430t; Replies by B. Upton 429t-430t

Alphabetical Subject Index

CORROSION, Volume 19, 1963

Note: All page numbers in CORROSION are followed by the letter "t" in order to distinguish the technical articles from others to be listed in the five-year CORROSION index for 1960-64.

A

Abrasion vs chemical polishing of zirconium, 169t

ACID
- Acetic, ferritic alloys vs, 186t
- Chromic, Ni-Cr-Mo alloy vs, 272t
- Hydrochloric, austenitic stainless steels vs, 308t
- " nickel-base alloys vs, 308t
- " Ni-Cr-Mo alloys vs, 272t
- " refractory metals vs, 308t
- " titanium vs, 217t
- " zirconium vs, 169t
- Hydrofluoric-nitric mixture, stainless steel pickling in, 408t
- Nitric, austenitic stainless steels vs, 63-308t
- " ferritic alloys vs, 186t
- " in etch solution, 120t
- " nickel-base alloys vs, 308t
- " Ni-Cr-Mo alloy vs, 272t
- " refractory metals vs, 308t
- " stainless steel vs, 210t, 408t
- Organic, as inhibitors, 12t
- " in inhibitor formation, 1t
- Phosphoric, austenitic stainless steel vs, 308t
- " ferritic alloys vs, 186t
- " nickel-base alloys vs, 308t
- " refractory metals vs, 308t
- Picric, in etch solution, 120t
- Sulfuric, anodic passivation of mild steel in, 300t
- " austenitic stainless steels vs, 308t
- " battery grade, mild steel vs, 300t
- " carbon steel vs, 300t
- " ferritic alloys vs, 186t
- " in etch solutions, 126t
- " iron contamination of in steel storage tanks, 37t
- " iron vs, 12t, 238t
- " mild steel vs, 300t
- " nickel-base alloys vs, 308t
- " Ni-Cr-Mo alloy vs, 272t
- " refractory metals vs, 308t
- " sodium chloride pickling of stainless steel, 408t
- " stainless steel vs, 210t
- " steels vs, 37t, 75t

Activation-controlled reactions, 81t

Age-hardening of cast stainless alloys containing ferrite, 186t

Aging, stress, related to stress corrosion cracking, 369t

Air, nickel-based alloys vs, 339t

Air-saturated sodium chloride solution in potential measurements, 403t

Alkalies, effect of on mild steel attack in steam generating systems, 327t
- ", mild steel vs, 327t

Alkyl propylenediamine in organic inhibitor formation, 1t
- " propylenediamine salicylate as inhibitor, 1t

ALLOYS
- Aluminum-copper, quenching rate vs structure, 242t
- ",", sodium chloride vs, 242t
- ", electrochemical behavior of, 403t
- ", high strength, intergranular corrosion susceptibility vs corrosion rate, 242t
- ", high temperature water vs, 295t
- ", initial corrosion rates of in high temperature water, 295t
- ", polarization in high temperature water, 146t
- ", 2024, sodium chloride vs, 242t
- Chromium-nickel-manganese stainless steels, 210t
- " steels, mercaptans vs, 396t
- Columbium, superheated steam vs, 134t
- Copper, chemical attack on, 373t
- ", dislocation substructure vs stress corrosion susceptibility of, 102t
- " -iron, high strength, corrosion-resistant, 186t

A—Continued

- Copper, magnesium chloride vs, 369t
- " -nickel, stress corrosion susceptibility of, 102t
- ", stress aging yield phenomenon, 369t
- Ferrous, dislocation substructure vs stress corrosion susceptibility of, 102t
- Iron-chromium and iron-chromium-silicon, corrosion rate measurements on, 17t
- "-", stress corrosion susceptibility of 102t
- " -copper, high strength corrosion-resistant, 186t
- ", effect of composition and structure on oxidation of, 231t
- ", high temperature aqueous corrosion of, 127t
- " -nickel, stress corrosion susceptibility of, 102t
- Magnesium-aluminum, chemical attack on, 373t
- ", magnesium chloride vs, 369t
- ", stress aging yield phenomenon, 369t
- Nickel-based, air vs, 339t
- "-", tests on at high temperature and pressure, 308t
- Nickel-Cr-Mo, heat treatment and microstructure effects on, 272t
- Single phase, dislocation substructure vs stress corrosion susceptibility of, 102t
- Steels, resistance evaluation of by polarization curves, 75t
- Stainless steel, high temperature water vs, 345t
- Zirconium, ammonium halides vs, 253t
- ", binary, hydrogen embrittlement of, 285t
- " ", " uptake of, 285t
- " ", steam vs, 285t
- " ", water vs, 285t
- ", corrosion of in high temperature halide solutions, 253t
- ", hydrogen vs, 414t
- ", lithium halides vs, 253t
- ", water vs, 414t

Alumina, sintered, crucible for molten carbonates, 292t

ALUMINUM
- Alloys, electrochemical behavior of, 403t
- ", intergranular corrosion of, 403t
- Alloy 2024, sodium chloride vs, 242t
- Bronzes, effects of manganese, iron, nickel and silicon in, 204t
- ", factors affecting mechanical properties of, 204t
- ", sea water vs, 204t
- Corrosion measurement of by eddy current gauge, 269t
- Aluminum, effect of on stress corrosion susceptibility of copper alloys, 102t
- High-strength alloys, intergranular corrosion susceptibility related to quenching rate, 242t
- High temperature water initial corrosion rates of alloys, 295t
- pH changes in environment near corroding surface of, 165t
- Polarization in high temperature water, 146t
- Sodium chloride vs, 403t

Amines in organic inhibitor formation, 1t

Ammonia, copper alloys vs, 373t

Ammonium halides, zirconium alloys vs, 253t
- " persulfate in etch solution, 120t

Amyl halides as inhibitors of mercaptan attack on steel, 396t
- " mercaptans, steel vs, 396t

A—Continued

Analysis, chemical, of corrosion products of stainless steel, 113t
- ", corrosion product, 272t
- ", electrochemical, of passivating characteristics of paint pigments, 69t
- " of stress by photo-elastic method, 45t
- " of stress corrosion by polarization, 45t

Anions, aggressive, effect of in metal pitting, 261t

Anneal, effect of type of on alloy properties, 186t

Annealing of Ni-Cr-Mo alloys, effect of method on corrosion resistance, 272t

Anodic control, 231t
- " polarization of iron in sulfuric acid, 238t
- " " " stainless steel in hydrogen halides, 180t
- " " " carbon steel in sulfuric acid, 300t
- " " " steel in H_2SO_4, 37t

Antimony, alloys with zirconium, hydrogen uptake of, 285t

Aqua regia, copper alloys vs, 373t
- " ", magnesium-aluminum vs, 373t

Aqueous corrosion at high temperature, iron, 127t

Argon in stainless steel tests for cladding suitability, 157t

Arrhenius equation applied to zirconium corrosion kinetics in hydrochloric acid, 169t

Atmospheric attack on painted metals, 69t

Austenite, conversion of to ferrite in stress corrosion of Type 304 steel, 315t
- ", effect of on age-hardening of alloys, 186t
- ", effect of alloy corrosion behavior, 231t

Austenitic stainless steels, molybdenum modified, 210t
- " " " stress corrosion susceptibility of, 102t

Autoclave in high temperature and pressure tests, 308t

B

Bases, organic, as inhibitors, 12t

Blistering of paint coating by water vapor, 55t

Blisters in carbon steel attack by H_2S, 1t

Boilers, mild steel, alkali attack on, 327t

Brass, stress corrosion cracking of, 331t
- " " " susceptibility of, 102t

Bromides, effect of on metal pitting, 261t
- " " " " passivity of stainless steel in sulfuric acid, 180t

Bromine-methanol solution in corrosion testing, 272t

Bubble test apparatus for corrosion measurement, 1t

C

Cantilever specimens in stress corrosion testing, 45t

Capacity method for determining passivation by paints, 69t

Carbide formation in stainless steels, 360t, 408t

Carbides in annealed Ni-Cr-Mo alloys, 272t

Carbonates in coatings on steel during cathodic protection, 59t
- ", molten magnesium oxide vs, 292t
- ", ", noble metals vs, 292t
- ", ", refractories vs, 292t

C—Continued

Carbon dioxide-hydrogen sulfide, iron vs, 354t
- " ", stainless steel vs, 157t
- ", effect of on stress corrosion susceptibility of stainless steel, 102t
- " monoxide, stainless steel vs, 360t
- " replica technique, 272t

Carbonyl formation in stainless steels, 360t

Carburization of stainless steel in carbon dioxide, 157t

Carburizing of stainless steel, 360t

Cast vs wrought structure in stress corrosion cracking of stainless steel, 345t

Cathodic depolarization of titanium in HCl, 217t
- " protection, coatings formed on steel by, 59t
- " reaction effect of in metal pitting, 261t

Cementite, 360t

Chemical polishing vs abrasion of zirconium, 169t

Chloride, concentration effect of on stress corrosion cracking of stainless steel, 345t
- ", effect of on passivity of stainless steel in sulfuric acid, 180t
- " ion, effect of on stainless steel vs nitric acid, 408t

Chlorides, effect of on metal pitting, 261t
- ", gold vs, 115t
- ", silver vs, 115t

Chlorine, electrolytic liberation of from potassium chloride solution, 421t

Chromate as inhibitor of stainless steel corrosion in high temperature water, 345t
- ", potassium, -sodium chloride, magnesium-aluminum vs, 373t

Chromates as inhibitors, 91t
- ", passivation by paints containing, 69t

Chrome steel, resistance evaluation of by polarization curves, 75t

Chromic ions, effect of on nitric acid attack on stainless steel, 408t

CHROMIUM
- Alloying, effect of on mercaptan corrosivity to steel, 396t
- Alloys, corrosion behavior of related to composition and structure, 231t
- " with zirconium, hydrogen uptake of, 285t
- ", analysis for in corrosion products of stainless steel, 113t
- Carbides of, 360t
- Cladding alloy for nuclear reactor, selection of, 339t
- " ", stainless steel as, 157t
- Coatings formed on steel during cathodic protection, 59t
- ", paint, passivation by, 69t
- Cobalt, analysis for in corrosion products of stainless steel, 113t
- Cold work, effect of on stress corrosion cracking of austenitic stainless steels, 247t
- Columbium, acids vs, 308t
- " alloys, superheated steam vs, 134t
- " -vanadium alloy properties, 134t
- Coolant, carbon dioxide as, in reactor, 157t
- Cooling rate, effect of on microstructure of aluminum bronzes, 204t
- " water, recirculating, techniques for investigating corrosion by, 91t

C—Continued

COPPER
Alloys, aqua regia vs, 373t
", magnesium chloride vs, 369t
", stress aging yield phenomenon related to stress corrosion cracking, 369t
-Aluminum, -gold and -zinc, ammonia vs, 373t
-", -" " -", analysis of chemical attack on, 373t
-", -" " -", ferric chloride vs, 373t
-", -" " -", stress corrosion cracking of, 373t
Analysis for in corrosion products of stainless steel, 113t
Effect of precipitated particles of at internal boundaries of iron-copper alloy, 186t
-Gold, potassium, cyanide vs, 373t
Ions, effect of on titanium in HCl, 217t
-Iron alloy, high strength, corrosion resistant, 186t

Corrosion engineering, 199t
" products, analysis of, 55t
" ", chemical analysis of stainless steel, 113t
Crack propagation in columbium alloy oxidation, 134t
Creep tests on stainless steel, 157t
Croloys, high temperature aqueous corrosion of, 127t
Crucibles for molten carbonates, 292t
Crystalline structure vs stress corrosion susceptibility of alloys, 102t
Crystallography in stress corrosion studies, 423t
Crystal structure, effect of on metal corrosion behavior, 231t
Cyanide, potassium, copper-gold vs, 373t

D

Dendritic growths in high temperature aqueous corrosion of iron, 127t
Depolarization, cathodic, of titanium in HCl, 217t
Diffraction methods of analyzing corrosion products, 55t
" patterns, iron sulfide, 354t
Diffusion-controlled reactions, 81t, 231t
Dislocation structure of iron whiskers, 120t
" substructure vs stress corrosion susceptibility, 102t
Ditch structure in etching for microphotography of corroded specimens, 272t
Ductility of metal vs stress corrosion cracking, 331t
" " stainless steel affected by carbon dioxide, 157t
Dusting, metal, corrosion, 360t

E

Eddy current gauge for measuring aluminum corrosion, 269t
Electrical resistance of zirconium oxide films, 414t
Electrochemical behavior of aluminum alloys, 403t
" methods for determining passivation by paint pigments, 69t
Electrode kinetics of oxide-covered aluminum, 403t
Electrolysis of potassium chloride, 421t
Electron metallography of chemical attack on alloys, 373t
" microscope pictures of Type 304 stainless steel structure, 315t
Electropolishing, effect of on alloy corrosion susceptibility, 102t
" of specimens for stress corrosion tests, 373t
Embrittlement by hydrogen uptake, 331t
", hydrogen, of iron in H_2SO_4, 12t
" " " zirconium alloys, 285t
Endurance, stress corrosion, statistical distribution of, 390t
Engineers, corrosion, qualifications of, 199t
Etching of iron whiskers, 120t
Etch structures, Ni-Cr-Mo alloy, 272t

F

Falex load and wear tests for lubricity, 1t
Faults, stacking, in single phase alloys, 102t
Ferric chloride, copper alloys vs, 373t
" ", magnesium-aluminum vs, 373t
" ions, effect of on nitric acid attack on stainless steel, 408t
" oxide (Fe_2O_3) deposits, effect of on halide attack on zirconium alloys, 253t
" sulfate in protective film on iron in sulfuric acid, 238t
" " -sulfuric acid, Ni-Cr-Mo alloy vs, 272t
Ferris wheel specimen arrangement, 45t
Ferrite, effect of on age hardening and corrosion of cast stainless alloys, 186t
" " " " alloy corrosion behavior, 231t
Ferritic alloys, acids vs, 186t
" stainless steels, resistance of, 210t
Ferrous sulfide scale as corrosion barrier, 9t
Film formation in hydrochloric acid attack on zirconium, 169t
", iron sulfide, properties of, 354t
" on aluminum alloys at high temperature, 146t
" rupture mechanism in stress corrosion cracking 331t
", temper, in high temperature aqueous corrosion of iron 127t
Fluid: solid reactions, 81t
Fluoride, effect of on passivity of stainless steel in sulfuric acid, 180t
" ion, effect of on corrosion rate of titanium in HCl containing noble metal ions, 217t
Formaldehyde as inhibitor, 9t
Fouling of heat exchange equipment, 91t
Four-ball load test for lubricity, 1t
Friction from scale causes pressure losses in tubular equipment, 91t

G

Galvanic cell formation, relation of to metal structure, 231t
Gauge, eddy current, for measuring aluminum corrosion, 269t
Germanium, effect of on stress corrosion susceptibility of copper alloys, 102t
Glass electrodes, 165t
Gold, chlorides vs, 115t
" -copper alloy, stress aging yield related to stress corrosion cracking, 369t
", effect of on stress corrosion susceptibility of copper alloy, 102t
", molten carbonates vs, 292t
", -palladium crucible for molten carbonates, 292t
", sulfates vs, 115t
Grain direction, stress-corrosion cracking vs, 45t
" orientation, effect of on metal corrosion behavior, 231t
Groove structure in etching for microphotography of corroded specimens, 272t

H

Halides, effect of on metal pitting, 261t
", hydrogen, effect of on anodic polarization of stainless steel, 180t
Halide solutions, zirconium alloys vs, 253t
Hardening of cast stainless alloys as affected by ferrite, 186t
Hardness of zirconium affected by heat treatment, 169t
Hastelloy C, acids vs, 272t
" ", heat treatment and microstructure effects on, 272t
" X, air vs, 339t
Heat exchangers, effects of fouling and scaling on, 91t
" transfer affected by fouling and scaling, 91t

HEAT TREATMENT
Effect of on stainless steel attack by nitric acid, 408t
Effect of on zirconium corrosion kinetics, 169t
Ni-Cr-Mo alloys, relationship of to corrosion resistance, 272t

Helium in zirconium alloy hydriding tests, 414t
Hematite coating on iron in high temperature water, 127t
Hydride layer, effect of under paint coating, 55t
Hydriding of zirconium alloys, 414t
Hydrocarbon, effect of on organic inhibitor efficiency, 1t

HYDROGEN
Absorption by zirconium alloys, 253t
As corrosion product, 55t
Effect of on structure of zirconium, 169t
Embrittlement by uptake of, 331t
" in H_2S attack on carbon steel, 1t
", iron in H_2SO_4, 12t
" of steels, 45t
" of zirconium alloys, 285t
Evolution region in steel polarization, 75t
Halides, anodic polarization of stainless steel in, 180t

H—Continued

Measurement in H_2S corrosion testing, 1t
Mercaptans vs steel in presence of, 396t
Pickup of by steel in relation to stress corrosion cracking in magnesium chloride, 315t
Stainless steel vs, 360t
Sulfide, concentrate vs film properties in attack on iron, 354t
", film from on iron in H_2S-CO_2-H_2O system, 354t
", iron vs, 354t
", joint action of with organic inhibitors, 12t
", mercaptans vs steel in presence of, 396t
", steel vs, 396t
Uptake by metals vs embrittlement, 331t
